

Geographical Eye Special: Planet Earth

Programme 1: Tectonics

Activity 3

The images below are taken from the programme, and show features created by movement of crustal plates. Match the sentences below to the images they refer to:

- 1) Water may mix with the ash to form a mud flow powerful enough to carry huge boulders along with it.
- 2) Lava may solidify to form a plug or dome at the summit of the volcano.
- 3) Shattered rocks, ash and steam may form a heavy cloud that then falls back to earth.
